

Install SST Software under Norton Data Protector

Please follow the instructions below to install SST software in the case a Norton antivirus software is installed on your PC.

After launching the SST-XXX-CFG configuration software for installation, Norton antivirus will prompt the following error message:

This happens due to Norton AntiVirus's new "Data Protector" feature. Data Protector alerts and blocks applications from deleting or changing files.

To address this issue, carefully perform the following steps:

1. Click on the "View Details" link in the error message box (typically located in the bottom right hand corner).
2. Click the "Exclude Process" button to exclude the SST-XXX-CFG.exe software.
3. Try installing the SST-XXX-CFG.exe configuration software again.
4. If the error message still appears, temporarily turn off the protection features of Norton antivirus on your PC. After the installation is successful, you can resume the protection of Norton antivirus.
